and Andrew Wilson

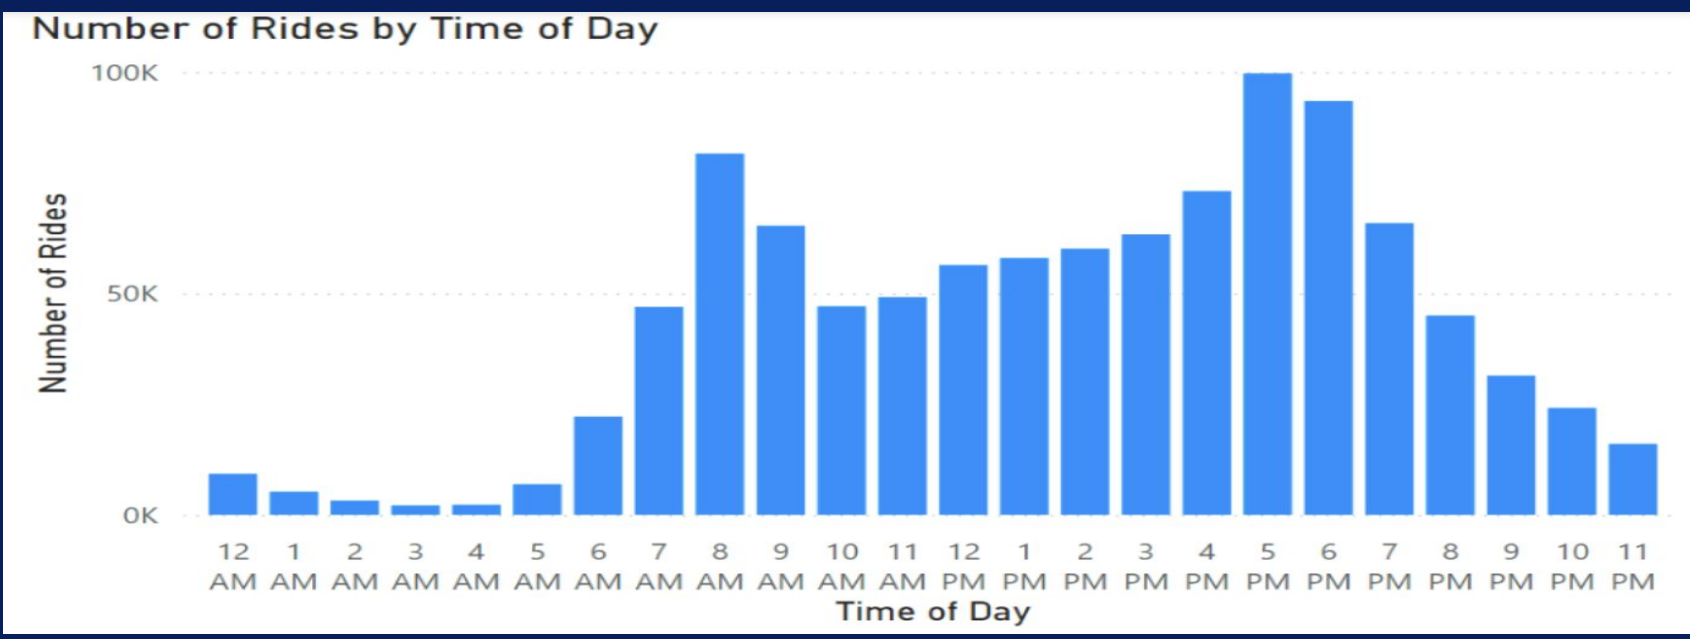

Problem Statement: Citi Bike usage varies in undesirable ways

Underutilized Stations

Citi Bike station usage is unbalanced, resulting in some stations having too many bikes, while others have too few.

Peak vs. Non-Peak Hours Usage Variation

Bike usage peaks at certain times of day, which means sometimes bikes are hard to find, but other times they are underutilized.

Problem Statement: Bike usage varies in undesirable ways

Temperature Usage Variation

Bike usage is seasonal, which means in the summer we are over-capacity and in the winter we are under-capacity.

Weather Usage Variation

Our bikes go nearly unused in the event of any subpar weather. Our revenue is way too dependent on the weather.

Current Angel Program doesn't effectively change consumer behavior

- It only incentivizes rebalancing. It does not affect weather, time of day, or seasonality
- Bike Angel program requires explicit sign-up, which reduces number of people who use it
- Only affects subscribers, not casual riders
- “Angels” are scamming the program by moving bikes back and forth between stations in order to collect rewards in a loop. The current program incentivizes *bad behavior*

Bike Angel cheaters

Seeing these people in action is super frustrating as a long time member of the bike angel community. People like this should have their memberships revoked.

I sat and watched a team of 4 guys shuffle bikes from one station on 60th and West End Ave to 59th and West End Ave, clearing out 1 station and waiting for the 15 min window to reset the values and then move all the bikes back to the other station. They literally rinsed and repeated this for hours. They were dripping with sweat, clearly having been doing the cheat job for hours on end, moving bikes back and forth between the two stations.

W

“Riders in Sunset Park or Kensington in Brooklyn or University Heights, Fordham, Morrisania, or Fordham Heights in the Bronx would have encountered Citi Bike stations with no bikes or no docks more than 20% of the time during peak hours throughout June and July.”

- NYC Comptroller

The Hustlers Who Make \$6,000 a Month by Gaming Citi Bikes

The bike-sharing program rewards users who help redistribute bikes around New York City. A few riders have figured out how to turn that into profit.

What does a typical Angel Scam look like?

Our team wants to replace the Bike Angels program with an enhanced program that will incentivize both subscribers and non-subscribers to help Citi Bike efficiently use bikes and balance usage of the system.

Extending Lyft's Solutions to

Partners

SUBSCRIBER BENEFITS

Dynamic Rewards

- Extend partnerships with Doordash, Delta, Hilton, Alaska Airlines, Bilt, Chase, and Mastercard
- Threshold-based rewards, Event-based Rewards
- Aids in Cross-Marketing Opportunities and Brand Affiliation

NON-SUBSCRIBER BENEFITS

Dynamic Pricing

- Personalized ride recommendations, tailored promotions, and responsive customer support through Lyft Technical Synergies
- Real-Time Incentives, Surge Period Shifts
- Aids in Preference Reinforcement and Geographic Targeting

OVERALL BENEFITS

- Added Value
- Increased Engagement
- Broader Audience Reach
- Habit Formation

Time of Day

How:

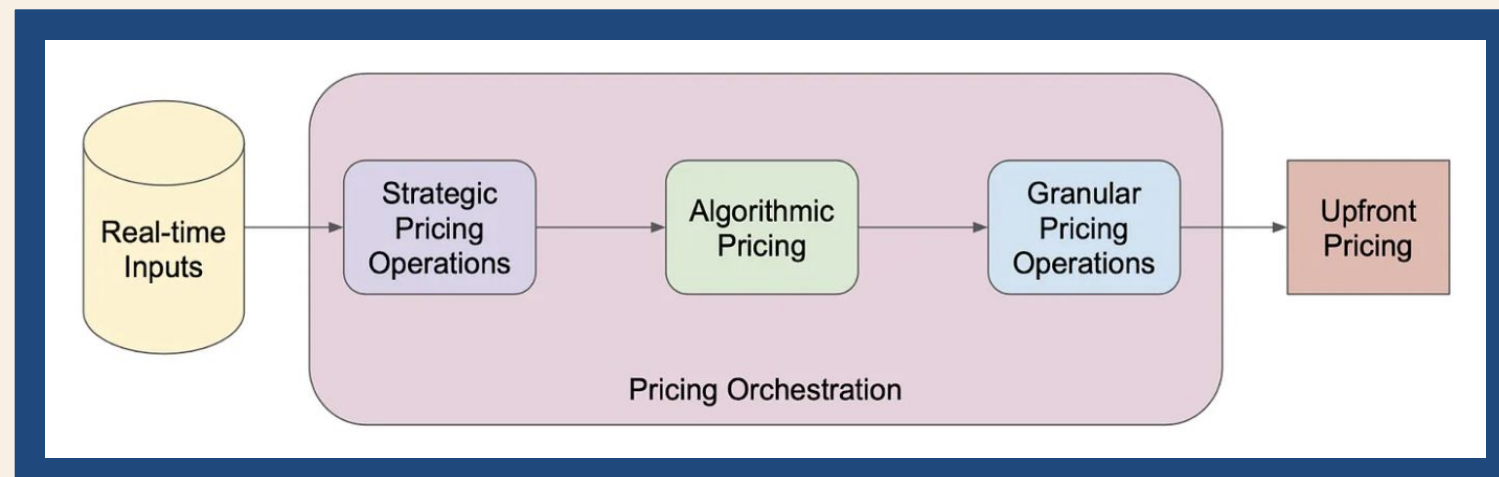

- **Implement dynamic pricing:** Adjust rates based on time-of-day demand and ride popularity
- **Utilize Lyft's pricing model:** Apply Surge pricing principles to manage peak periods effectively

For Whom:

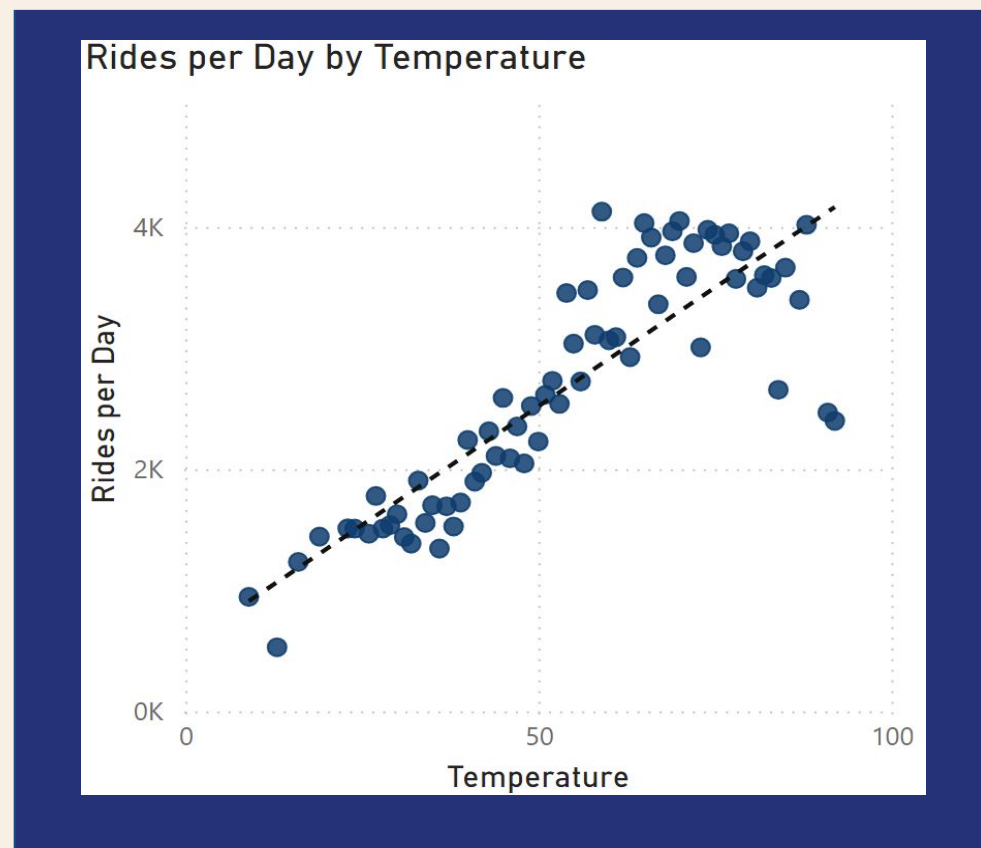

- **Target non-subscribers:** Although casual riders account for 15% of customers, they represent 30% of total ride time.

Why:

- **Drive subscriptions:** Encourage casual riders to convert to subscribers while ensuring bike availability for subscribers during peak hours who are commuting

Weather

How:

- **Factor weather variables into dynamic pricing/rewards algorithm**
 - Temperature, Wind Speed, Snow, and Rain

For Whom:

- **Subscribers & Non-Subscribers:** Lower price or program reward during bad weather to keep them relying on Citi Bike even in poor weather conditions

Why:

- **Increase Revenue:** Currently we make little money on bad weather days. Lower pricing can incentivize usage and recover some of our revenue
- **Increase Loyalty:** Users will use Citi Bike every day, not just sunny days

Routes

How:

- **Leverage station** station capacity
- **Introduce capacity** users for returning capacity stations.

For Whom:

- **Subscribers and** encourage all cons

Why:

- **Address bike dist** particularly on high
- **Prioritize Address** of the system experience far more unusable stations, disproportionately affecting Black, Latino, and low-income residents” (NYC Comptroller)

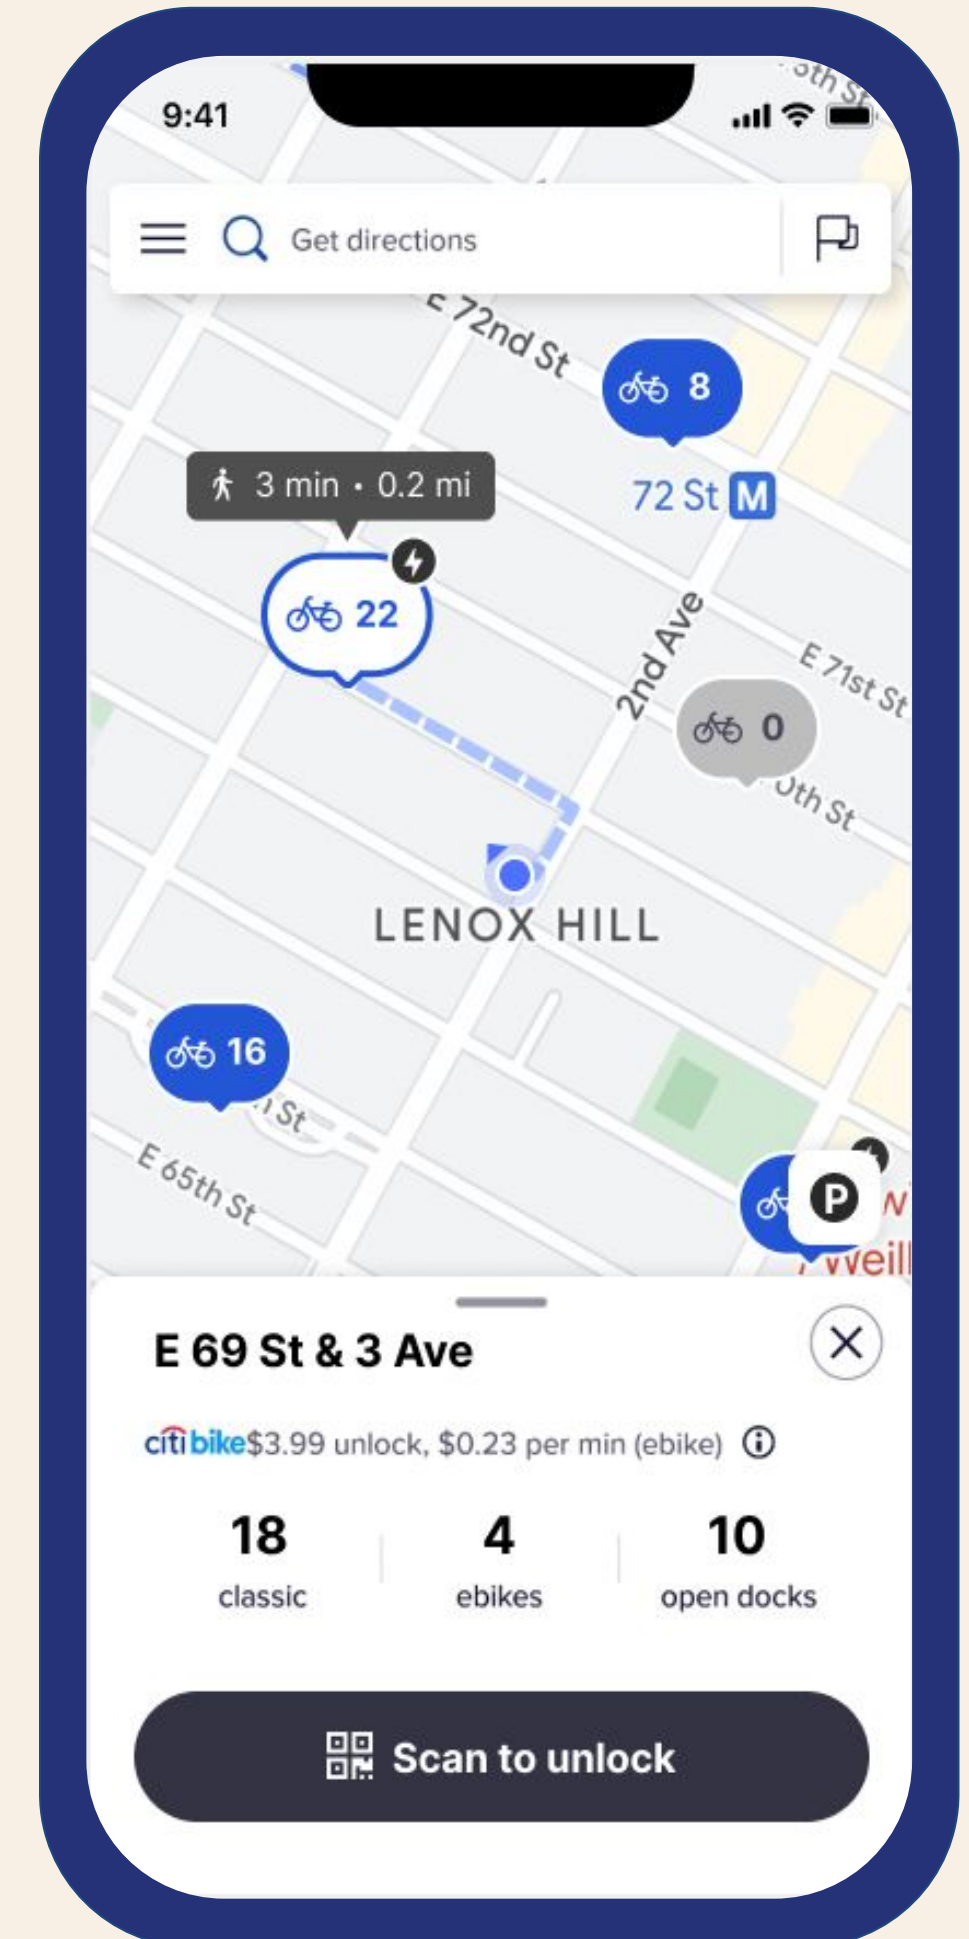

bike availability and

cing can
ors

bike flow,

on the outer edges
disproportionately

Our program will mitigate all challenges

System Abuse

Cap points earned by customers and subscribers to prevent financial losses

Bike Shortages During Transition

Use the existing Ride Angels program while the program is being implemented and users start to take advantage of new program

Costs

Initial costs will exist (rewards, partnerships, software) but will be offset by benefits

Defining and Measuring Success: KPIs and ROI for the Rewards Program

Pain Point

KPI

ROI

Unbalanced Station Usage

- Station utilization/capacity rates
- Percentage of stations with poor service in communities with proportionately more Black, Latino, and low-income residents

Cut costs with less labor required for balancing, increasing overall equity by stabilizing supply of bikes

Peak / Non-Peak hours

- Percentage of total rides during non-peak hours
- Growth rate of usage of non-peak hours

Increases usage during non-peak hours will lead to revenue increase

Weather Usage Variation

- Ride rate during precipitation and snow
- Ride rate during colder months

Decreases risk of lower profits during bad weather, decreases the cyclical nature of demand

Utopia

MODERN & ACCESSIBLE &

INNOVATIVE

EMPOWERED CUSTOMERS

- Riders actively contribute to system efficiency
- Choosing routes & time
- Engage with interactive rewards system

SUSTAINABILITY

- Seen as environmentally responsible through resource optimization + lower reliance on trucks for moving bikes
- Encouraging bike usage during cold and slightly rainy weather conditions

ACCESSIBILITY

- Increased access for outer edges of NYC map, particularly Black and Latino communities
- Inclusive and reliable for all, offering incentives for weather challenges and non-peak hours

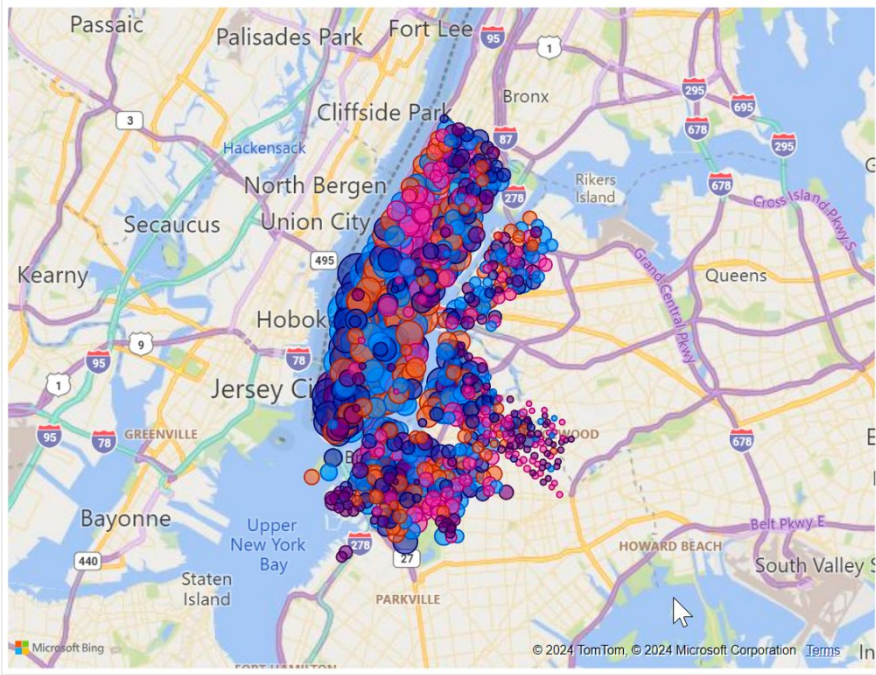

Thank you!
